## INTRODUCTION

This volume is the second pregnancy report for North Carolina. The data of this report include reported induced abortions, live births, and fetal deaths. The sum of these events represents total reported pregnancies.

The following section uses tables, graphs, maps, and narrative to examine statewide trends and patterns in pregnancy, live birth, abortion, and fetal death. Subsequent sections of this report examine selected characteristics of abortions, live births, and fetal deaths with emphasis on abortions since they are not elsewhere reported. Finally, for the state, regions, and 100 counties, one-page tables summarize resident abortions, live births, fetal deaths and total pregnancies by race and age for total and unmarried women. These tables, which have been produced but not published for many years, are frequently requested. This is the major impetus for publishing the present report rather than the abortion report published prior to data year 1989.

*Users should note a change* in the case of newborn's race. In 1989 and prior years, race of child was based on race of mother and race of the father (when known): A child was ascribed the darker of the two races. Beginning in 1990, race of the child is taken to be that of the mother regardless of race of father. This change serves to reduce the number of nonwhite births and fetal deaths and increase the number of white events. Users should be aware of this change when assessing trends before and after 1990. In 1990, the change resulted in 3.5 percent fewer live births and 2.0 percent fewer fetal deaths being coded nonwhite.

Throughout this report, data year 1978 is used as the base since that was the first year that abortion providers voluntarily reported detailed characteristics on nearly all of their procedures. Corresponding data for earlier years were obtained from a sample and may not be representative.

Hospitals and clinics in North Carolina reported detailed information on an estimated 94 percent of all abortions performed in 1990. For those facilities not reporting 100 percent, the characteristics data have been expanded in a random manner to agree with each facility's total number of abortions. These adjustments should not seriously bias the results. For live births and fetal deaths, reporting of the events is believed to be virtually 100 percent, although the variables include a number of unknown or not stated values.

For the maps of this report, a clustering routine from the Statistical Analysis System (SAS) was used to group counties that are "most like each other" with respect to the statistic being examined. This procedure may result in very large or very small groups, depending on how the counties differ from one another.

It is hoped that this report will serve many of the data needs of those individuals and agencies delivering and/or planning health services for the childbearing population of the state. Users' comments are always welcomed. You may contact this office at (919) 733-4728, or address correspondence to:

## TRENDS AND PATTERNS IN PREGNANCY, LIVE BIRTH, ABORTION, AND FETAL DEATH

North Carolina's total resident **pregnancy rate** (pregnancies per 1,000 females ages 15-44) declined in 1980 and 1981, stabilized over the next five years, and rose in each year 1987-1990 (see below). The recent increase involved both races, especially nonwhites whose rate increase began in 1986 and exceeded six percent in 1988 alone.

Live births are the greatest contributor to total pregnancies, so it is not surprising that the state's **fertility rate** (live births per 1,000 females ages 15-44) has followed the same course as the pregnancy rate. Again, the nonwhite increase began earlier and exceeds that for whites. The nonwhite rate rose 15 percent between 1984 and 1990 while the white rate rose less than 12 percent during that period. The increase has occurred in most age groups but has been more marked in women over 30. Recent trends toward unmarried and/or delayed childbearing may be contributing factors. It should be expected that both white and nonwhite fertility will soon peak as the "baby boom" moves past the prime childbearing years. However, no one can predict the confounding effects of new methods of birth control and the return of troops from the Middle East. The latter is known to have resulted in increased childbearing during late 1991.

Following a period of relative stability, the state's **abortion rate** (abortions per 1,000 females ages 15-44) spiked in 1984, declined for two years, then rose for two years, and declined again in 1989 and 1990. The nonwhite rate rose 8.5 percent in 1988 to an all-time high. The rate for both race groups declined in 1989 and 1990.

Based on data for 1978-1986, the state's abortion and fertility rates are negatively correlated at a high level, especially for nonwhites. However, for both races and especially nonwhites, the abortion and fertility rates both rose in 1987 and 1988, and for nonwhites they both fell in 1990.

The statewide **abortion fraction** (abortions per 1,000 pregnancies) and the abortion rate are highly correlated. The fraction, like the rate, spiked in 1984, increased slightly between 1985 and 1988, and then declined in 1989 and 1990.

In considering recent changes in abortion and fertility measures, especially those for nonwhites, one should be aware of changes in the number of state-funded abortions. In July 1985, the North Carolina General Assembly enacted legislation tightening the qualifications for those abortions, and the number paid for by state funds then dropped 58 percent in FY-1986 to less than 3,000 procedures. The following year, in FY-1987, the number rebounded to more than 4,000 procedures. In FY-1990, however, the State Abortion Fund received less than half its former appropriation, and the number of procedures dropped to under 2,000. During the first 10 months of FY-1991, a total of 2,175 procedures were funded. Changes in the statewide number and rate of abortions almost certainly reflect these changes in accessibility for poor women. Abortion opportunities and utilization, of course, also impact on fertility and probably fetal death as well.

ABORTION RATES BY RACE  
NORTH CAROLINA, 1978 - 1990

ABORTION FRACTIONS BY RACE  
NORTH CAROLINA, 1978 - 1990

The final component of total reported pregnancies is the relatively small number of fetal deaths (reported stillbirths of 20 or more weeks gestation). The state's *fetal death rate* (fetal deaths per 1,000 deliveries) declined steadily between 1978 and 1985, but with no improvement since. Actually, the white rate has continued to decline, but the nonwhite rate rose in 1988 and was about the same in 1990 as in 1982. Reduced accessibility of abortion to poor (high-risk) women may be a contributing factor.

For each year 1978-1990, the total and race-specific measures discussed above are given in the following table. Pregnancy and abortion rates for 1980-1983 are not the same as published in some previous abortion reports due to more recent use of updated population estimates. In almost all cases, the updated rates are lower than the rates previously published.

On pages 2-5 through 2-18, maps and tables depict county-specific pregnancy, fertility, and abortion rates as well as abortion fractions for 1990. Fetal death rates are not given due to the instability of the county rates for a single year. Users are referred to the five-year fetal death rates published in *North Carolina Vital Statistics, Volume 1*.

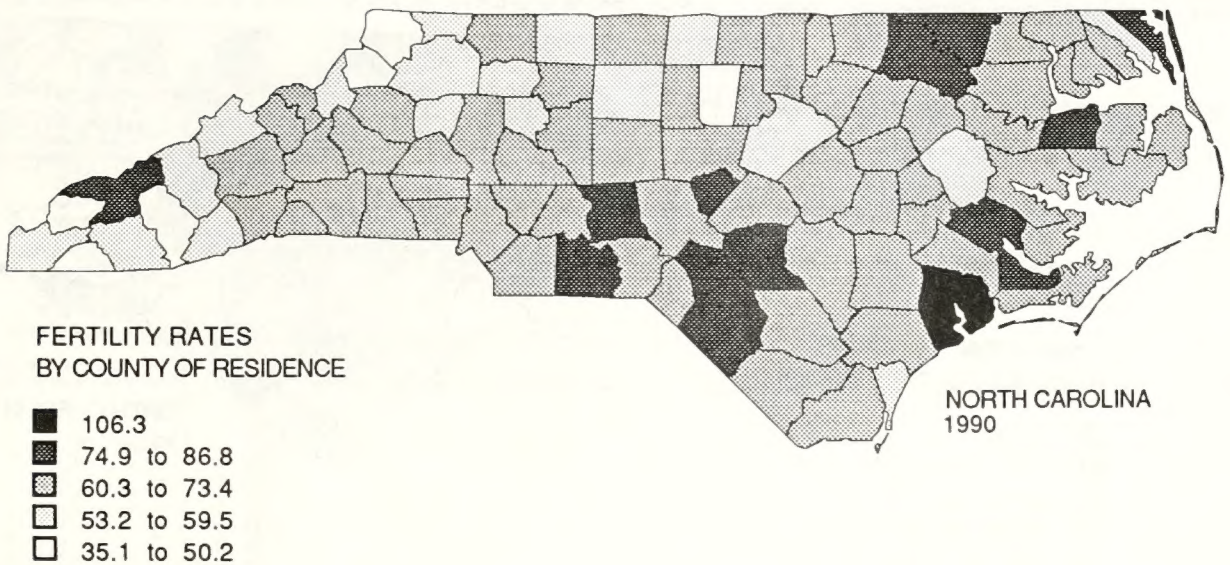

Clustered alone with the highest pregnancy rate is Onslow County; closest to it are Cumberland, Craven and Swain counties. These counties also had some of the highest fertility rates. Orange County had the highest abortion rate and abortion fraction. Closest to it are generally the larger, more urban counties.

For total women ages 15-44, pregnancy rates vary by county from 52.9 to 132.7 per 1,000 women, fertility rates vary from 35.1 to 106.3 per 1,000 women, abortion rates vary from 2.7 to 34.0 per 1,000 women, and abortion fractions vary from 57.3 to 474.2 abortions per 1,000 pregnancies. Special attention should be given to counties with high pregnancy rates among teenagers (ages 15-19). For example, Halifax, Montgomery, Onslow, and Swain counties all had teenage pregnancy rates at least 25 percent higher than the statewide teenage pregnancy rate of 105.4. The county data for teenagers are tabled on pages 2-9 and 2-10.

## SUMMARY OF CHARACTERISTICS OF INDUCED ABORTIONS

During 1990, the licensed facilities of North Carolina reported 36,494 abortions to the State Center for Health and Environmental Statistics, an increase of 34 percent over the number reported in 1978. As in previous years, women obtaining these abortions were most often white, between the ages of 15 and 24, and not married. Most had never had a previous abortion and had no living children. The table on the next page displays these percentages for each year 1978-1990.

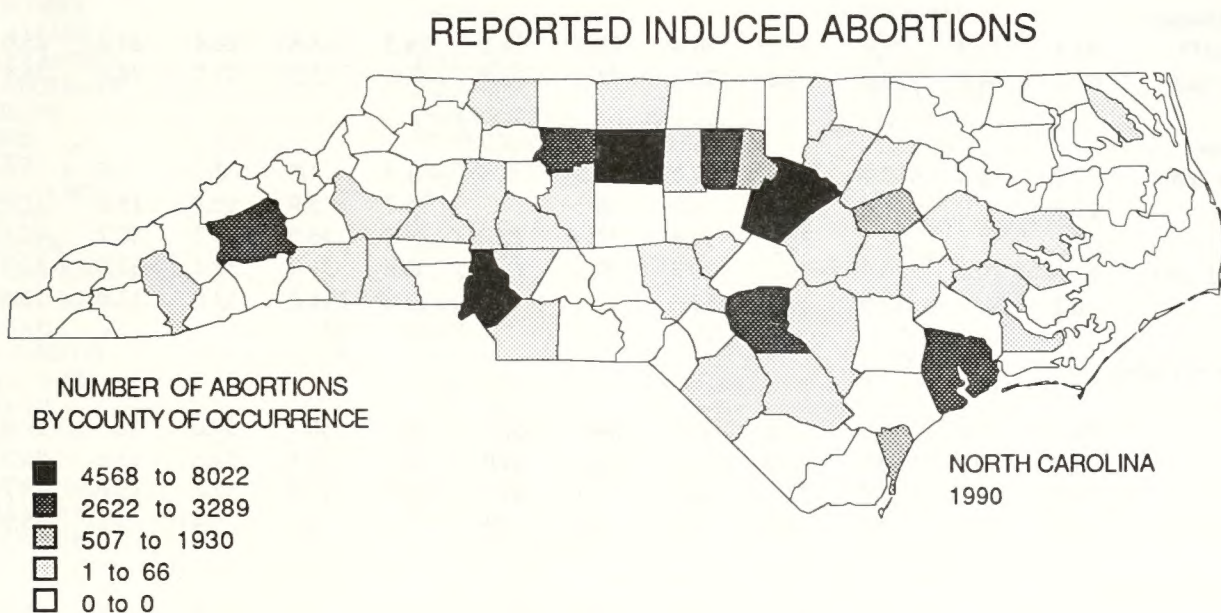

Compared to a total of at least 40 states reporting detailed data for 1988 [latest year reported by the Centers for Disease Control (CDC)], women having abortions in North Carolina were more likely to be between the ages of 15 and 24, to be unmarried, to have had no previous abortions, to have had the present abortion at twelve or fewer weeks of pregnancy, and to have had suction curettage.

### Place of Occurrence

The table on page 3-3 details 1990 North Carolina occurrences according to region and county of occurrence. Of the 36,494 abortions reported in North Carolina, 89 percent occurred in eight counties. Twenty-two percent of the state total occurred in Mecklenburg, 16 percent occurred in Guilford, and 13 percent occurred in Wake.

In 1990, a total of 1,111 or 3.2 percent of North Carolina resident abortees received abortions in other states. Of these, 50 percent occurred in Virginia, 24 percent occurred in South Carolina, and 22 percent occurred in Georgia. The remaining four percent occurred in Arkansas, Indiana, Maryland, Missouri, New Mexico and Tennessee.

The number of 1990 abortions occurring in each North Carolina county is mapped below.

### Facility of Occurrence

Nationwide in 1980, hospitals constituted 55 percent of all providers, yet performed only 22 percent of all induced abortions. In North Carolina, 93 hospitals (79 percent of providers) performed 19.5 percent of all abortions. More than half of the hospital abortions occurred in ten hospitals.

In 1990, 49 hospitals performed only four percent of abortions occurring in North Carolina. The remaining 96 percent occurred in 37 nonhospital facilities.

*The remainder of the data appearing in this publication will be resident data. The base year appearing in the trend graphs is 1978. That is when the voluntary reporting of detailed abortion data increased to nearly 100 percent, which substantially improved the reliability of the abortion estimates for population subgroups.*

### Place of Residence

During 1990, a total of 3,040 (8%) of abortions performed in North Carolina were to residents of other states. Of these, 53 percent were residents of South Carolina and 36 percent were residents of Virginia. Tennessee accounted for 2.6 percent of North Carolina's nonresident abortions; West Virginia, 1.2 percent; and Georgia, 1.1 percent.

Among abortions to residents of North Carolina, the distribution by county of residence varied widely during 1990 with all 100 counties represented. The most populous counties accounted for the greatest frequencies, as shown below.

PERCENT INDUCED ABORTIONS BY RACE OF ABORTEE  
NORTH CAROLINA, 1978 - 1990

### Race

Of the 34,565 North Carolina women known to have had abortions during 1990, a total of 19,792 (57%) were white; 12,714 (37%) were black; 295 (1%) were American Indian; and 755 (2%) were other races. For the remainder, race of the abortee was unknown. Nonwhite women have higher abortion rates and fractions than white women (see page 2-2).

North Carolina resident induced abortions by race of abortee for 1978 through 1990 are given below.

**Resident Induced Abortions  
By Race of Abortee  
North Carolina, 1978-1990**

Year	Total	White	Nonwhite
1978	25,277	15,806	8,946
1979	27,799	17,386	9,664
1980	30,155	18,697	10,975
1981	30,000	18,562	10,863
1982	29,890	18,925	10,369
1983	31,892	20,038	11,235
1984	34,138	20,705	12,825
1985	32,478	19,648	12,328
1986	32,849	19,816	12,353
1987	34,344	20,457	13,346
1988	36,066	20,988	14,711
1989	34,907	19,966	14,242
1990	34,565	19,792	13,764

NOTE: Race-specific counts do not sum to the total due to cases of unknown race.

## Age

The mean age of North Carolina residents having abortions during 1990 was 23.8 years. The highest percentage of abortions was to women between 20 and 24 years of age. The percentage at younger ages has declined since 1978.

In 1988, the most current year of age-specific data from CDC, 56.7 percent of United States abortees were between the ages of 15 and 24 years. This compares to 61.3 percent of 1988 North Carolina abortees and 59.8 percent of 1990 North Carolina abortees.

In 1990, North Carolina's resident abortion rate was 36.5 per 1,000 females ages 15-19 and 44.8 per 1,000 females ages 20-24, dropping substantially thereafter to 4.6 per 1,000 females ages 35-44. The statewide abortion fraction was highest at ages 15-19 (346.4 per 1,000 pregnancies) and lowest at ages 30-34 (164.6 per 1,000 pregnancies).

PERCENT INDUCED ABORTIONS BY AGE OF ABORTEE  
NORTH CAROLINA, 1978 - 1990

Age-adjusting the North Carolina abortion rates for women ages 15-44, using the July 1980 North Carolina female population as the standard, yields the following:

	Crude Rate	Age-Adjusted Rate
1980	21.6	21.2
1981	21.2	21.0
1982	20.8	21.0
1983	21.9	22.3
1984	23.1	23.6
1985	21.7	22.3
1986	21.4	22.3
1987	22.2	23.3
1988	23.1	24.5
1989	22.1	23.7
1990	21.7	23.9

Comparing the adjusted rates across years, it is seen that the rate rose about six percent in each of 1983 and 1984, then declined before increasing again in 1987 and 1988. The net increase between 1980 and 1990 was about 13 percent. The following table corroborates age-specific increases in abortion use during the 1980s. Increased rates are observed in all age groups; however, the abortion fraction has declined at ages 15-19, 30-34, and 35-44.

### Marital Status

Only 23.3 percent of North Carolina residents receiving abortions during 1990 were legally married at the time of the procedure. This compares to 28 percent in 1980 and 32 percent in 1978. Among all states reporting to CDC in 1988, 20 percent of the abortees were married.

Unmarried women (those widowed, divorced or never married) constituted 73.6 percent of North Carolina resident abortees during 1990. This compares to 70 percent in 1980 and 66 percent in 1978. Among abortions reported to CDC in 1988, about 80 percent of abortees were unmarried.

NORTH CAROLINA, 1978 - 1990

### Educational Attainment

The mean educational attainment of residents receiving abortions during 1990 was 12.7 years. Seventy-one percent had had at least 12 years of education; this compares to 60 percent during 1978.

Educational attainment has remained a high non-response variable in the reporting of abortions. Sixteen percent of North Carolina resident abortion reports for 1990 did not specify educational attainment of the abortee.

### Number of Living Children

Fifty percent of North Carolina resident abortees in 1990 had no living children. The percentage having three or more living children has decreased, from 7.8 in 1978 to 5.8 in 1990.

The number of North Carolina women obtaining abortions in 1990 was inversely related to the number of living children. This pattern has prevailed since 1978.

PERCENT INDUCED ABORTIONS  
BY NUMBER OF LIVING CHILDREN  
NORTH CAROLINA, 1978 - 1990

PERCENT INDUCED ABORTIONS  
BY PREVIOUS ABORTION  
NORTH CAROLINA, 1978 - 1990

### Previous Abortions

The issue of repeat abortion is a matter of concern; 34 percent of North Carolina women having abortions during 1990 reported at least one previous abortion. This compares to 19 percent in 1978.

Of the 11,693 abortees reporting a prior abortion, 72 percent reported one, 20 percent reported two, and eight percent reported three or more.

Based on 1988 data reported to CDC, abortees in other states were more likely than North Carolina abortees to report a previous abortion.

### Gestation

During 1990, 86 percent of North Carolina resident abortions were performed within the first 12 menstrual weeks of pregnancy. Eight percent of women obtained abortions in the 13-16 week interval while 2.0 percent obtained later abortions. In 1978, 86 percent of women obtained abortions within 12 menstrual weeks.

In 1990, the percentage of women obtaining abortions beyond the 20th week of gestation was 0.4, the same as in 1985. The mean gestational weeks of pregnancy was 9.3 in 1985 and 1986, 9.4 in 1987, 9.2 in 1988 and 1989, and 9.0 in 1990.

Compared to abortees in other states in 1988 (CDC data), North Carolina abortees were more likely to have the procedure during the first eight weeks and less likely to have it beyond the sixteenth week.

PERCENT INDUCED ABORTIONS  
BY WEEKS OF GESTATION  
NORTH CAROLINA, 1978 - 1990

## **Complications**

Abortion providers report relatively few complications associated with abortion. Compared to 1.5 percent in 1978, only 0.3 percent of resident abortions during 1990 involved reported complications. The most frequently reported condition was "retained products."

## **Terminating Procedures**

Suction curettage accounted for 97.5 percent of all resident abortion procedures reported for 1990. This was followed by prostaglandin injection (1.0%), saline injection (0.6%), other procedures not specified (0.6%), and sharp curettage (0.3%). Major abdominal operations for abortions (hysterectomy) accounted for only 0.02 percent of total abortion procedures.

During the first twelve weeks of gestation, suction curettage is commonly used. As more abortees have utilized clinics and obtained earlier abortions, the percentage of abortions performed by suction curettage has increased from 90 percent in 1978 to the present 97.5 percent.

## SELECTED CHARACTERISTICS OF RESIDENT LIVE BIRTHS AND FETAL DEATHS

### Live Births

Following many years of steady decline, the state's fertility rate bottomed out during the mid-eighties and is now rising. In absolute numbers, the upward trend amounts to an increase of 27 percent since 1978 to 104,439 resident live births in 1990. This means an additional 22,000 live births per year in a time when many physicians are leaving obstetrical practices or refusing Medicaid patients. Moreover, women at high risk of unfavorable pregnancy outcomes are contributing disproportionately to the increase.

Here, we examine several live birth trends that evoke particular public health concern because of possible economic, emotional, and health consequences to mother/child. Several other publications available from this office offer much more detail about live births and their maternal and medical characteristics. Region, county, and some city data are also available.

### Race

As depicted graphically on page 2-1, recent increases in the fertility rate have been greater for nonwhites than for whites. The table below shows the absolute numbers of live births by race. The white number rose 28 percent while the nonwhite number rose 24 percent between 1978 and 1990.

**Resident Live Births  
by Race of Child  
North Carolina, 1978-1990**

YEAR	TOTAL	WHITE	NONWHITE
1978	82,407	55,526	26,881
1979	83,782	56,480	27,302
1980	84,481	57,286	27,195
1981	83,752	56,756	26,996
1982	85,908	58,149	27,759
1983	83,854	57,446	26,408
1984	85,986	59,399	26,587
1985	89,391	61,766	27,625
1986	90,228	61,746	28,482
1987	93,481	63,876	29,605
1988	97,560	65,937	31,623
1989	102,091	68,455	33,636
1990	104,439	71,095	33,344

### Maternal Age

The graphs on the next page depict trends in age-specific white and nonwhite fertility rates. Recent increases are observed in all age-race groups, although the rate for nonwhites 35-44 was about the same in 1990 as in 1978.

Of particular concern are the rising rates among younger and older mothers, among whom health consequences to mother and her child are often more frequent and severe. The higher but declining fetal death rates of older mothers are shown in the table on page 4-5.

WHITE FERTILITY RATES BY AGE  
NORTH CAROLINA, 1978 - 1990

NONWHITE FERTILITY RATES BY AGE  
NORTH CAROLINA, 1978 - 1990

### Unmarried Mothers

High divorce rates and the widespread tendency to delay marriage to older ages have both contributed to growth in the unmarried female population. In addition, the fertility rate of unmarried women has increased. Together, these factors have resulted in a steady rise in the percentage of live births occurring out of wedlock.

Beginning at 18.1 in 1978, the percentage of North Carolina live births to unmarried mothers reached 29.4 in 1990. By race, the white percentage more than doubled, from 5.6 to 14.2; while the nonwhite percentage rose by 41 percent, from 43.9 to 61.9. The numerical increases in births to unmarried mothers have been 222 percent for whites and 75 percent for nonwhites—a total of 105 percent more of these births in 1990 than in 1978.

PERCENT LIVE BIRTHS TO UNMARRIED MOTHERS  
NORTH CAROLINA, 1978 - 1990

## Low-Weight Births

Low birthweight (5 pounds, 8 ounces or less) is the single greatest contributor to infant mortality and morbidity. Thus, it is a matter of urgent concern that North Carolina's low-birthweight rate of 8.0 percent in 1990 was no better than that observed at *mid-century*. North Carolina's rate is also among the highest in the nation.

The accompanying graph reveals a slight improvement among whites between 1978 and 1983 with none since then and an increased rate among nonwhites in the 1987-1989 period. In absolute numbers, white and nonwhite low-weight births have risen by 24 and 33 percent respectively since their low points of the 1978-1990 period.

PERCENT LOW-WEIGHT LIVE BIRTHS BY RACE  
NORTH CAROLINA, 1978 - 1990

PERCENT VERY LOW-WEIGHT LIVE BIRTHS BY RACE  
NORTH CAROLINA, 1978 - 1990

## Very Low-Weight Births

These babies have birthweights of 3 pounds, 4 ounces or less. As shown by the accompanying graph, the percentage of newborns at these weights has fluctuated around 1.0 for whites and between 2.4 and 2.9 for nonwhites over the 1978-1990 period. In absolute numbers, both white and nonwhite births at these very low weights have risen by 47 percent since their low points of the last 13 years.

### No Prenatal Care

Although still representing a relatively small fraction of all live births, the increasing percentage of births to mothers who had no prenatal care is a major concern. That percentage has risen sharply since 1984 and is now twice its 1978 level. The increase has been 100 percent for both whites and nonwhites. In absolute numbers, 140 percent more whites and 153 percent more nonwhites had no prenatal care in 1990 than in 1978. However, it is somewhat encouraging that the nonwhite percentage did fall in 1990 for the first time in a decade, from 3.6 to 3.4. Simultaneously, the white percentage rose, from 0.9 to 1.0.

PERCENT LIVE BIRTHS WITH NO PRENATAL CARE  
BY RACE  
NORTH CAROLINA, 1978 - 1990

## Fetal Deaths

As shown graphically on page 2-3, both whites and nonwhites experienced some reduction in fetal mortality over the 1978-1990 period. However, the state's overall rate remains one of the highest in the nation.

This section examines trends in white and nonwhite fetal death by race and maternal age. Race-specific fetal death rates for regions, counties, and cities are available in *North Carolina Vital Statistics, Volume 1*, and fetal death rates for the various maternal characteristics and medical risk factors will be examined in the forthcoming Birth and Infant Mortality report, scheduled for production in 1992. Counties are urged to use five-year fetal death rates rather than the less stable single-year rates.

### Race

Since 1978, the decrease in fetal mortality (fetal deaths per 1,000 deliveries) has been about the same for whites (24%) as for nonwhites (19%). However, as shown in the table below, there has been virtually no change for either race in the number of fetal deaths.

**Resident Fetal Deaths by Race  
North Carolina, 1978-1990**

YEAR	TOTAL	WHITE	NONWHITE
1978	923	474	449
1979	932	506	426
1980	877	472	405
1981	864	466	398
1982	863	492	371
1983	818	449	369
1984	766	461	305
1985	775	445	330
1986	800	440	360
1987	814	477	337
1988	872	443	429
1989	899	455	444
1990	911	463	448

### Maternal Age

Because of the instability of the fetal death rates by race and age, they are not graphed here. However, the table below serves to point up the higher rates among mothers 35 and older as well as the age-race-specific declines since 1978. By 1990, the rate for whites 35 and older had dropped 52 percent since 1978. The rate for older nonwhites also dropped substantially between 1979 and 1989 but rose 28 percent in 1990.

**Fetal Death Rates by Age and Race  
North Carolina, 1978-1990**

#### 38a. MEDICAL HISTORY FOR THIS PREGNANCY

(Check all that apply)

Anemia (Hct < 30/Hgb. < 10) ..... 01 ☐  
Cardiac disease ..... 02 ☐  
Acute or chronic lung disease ..... 03 ☐  
Diabetes ..... 04 ☐  
Genital herpes ..... 05 ☐  
Hydranmios/Oligohydramnios ..... 06 ☐  
Hemoglobinopathy ..... 07 ☐  
Hypertension, chronic ..... 08 ☐  
Hypertension, pregnancy-associated ..... 09 ☐  
Eclampsia ..... 10 ☐  
Incompetent cervix ..... 11 ☐  
Previous infant 4000+ grams ..... 12 ☐  
Previous preterm or small-for-gestational-age infant ..... 13 ☐  
Renal disease ..... 14 ☐  
Rh sensitization ..... 15 ☐  
Uterine bleeding ..... 16 ☐  
None ..... 00 ☐  
Other (Specify) ..... 17 ☐

#### 38b. OTHER HISTORY FOR THIS PREGNANCY

(Complete all items)

Tobacco use during pregnancy ..... Yes ☐ No ☐  
Average number cigarettes per day .....  
Alcohol use during pregnancy ..... Yes ☐ No ☐  
Average number of drinks per week .....  
Weight gained during pregnancy ..... lbs.

#### 39. OBSTETRIC PROCEDURES

(Check all that apply)

Amniocentesis ..... 01 ☐  
Electronic fetal monitoring ..... 02 ☐  
Induction of labor ..... 03 ☐  
Stimulation of labor ..... 04 ☐  
Tocolysis ..... 05 ☐  
Ultrasound ..... 06 ☐  
None ..... 00 ☐  
Other (Specify) ..... 07 ☐

#### 40. EVENTS OF LABOR AND/OR DELIVERY

(Check all that apply)

Febrile (> 100° F. or 38° C.) ..... 01 ☐  
Meconium, moderate/heavy ..... 02 ☐  
Premature rupture of membrane (> 12 hours) ..... 03 ☐  
Abruptio placentae ..... 04 ☐  
Placenta previa ..... 05 ☐  
Other excessive bleeding ..... 06 ☐  
Seizures during labor ..... 07 ☐  
Precipitous labor (< 3 hours) ..... 08 ☐  
Prolonged labor (> 20 hours) ..... 09 ☐  
Dysfunctional labor ..... 10 ☐  
Breech/Malpresentation ..... 11 ☐  
Cephalopelvic disproportion ..... 12 ☐  
Cord prolapse ..... 13 ☐  
Anesthetic complications ..... 14 ☐  
Fetal distress ..... 15 ☐  
None ..... 00 ☐  
Other (Specify) ..... 16 ☐

#### 41. METHOD OF DELIVERY

(Check all that apply)

Vaginal ..... 01 ☐  
Vaginal birth after previous C-section ..... 02 ☐  
Primary C-section ..... 03 ☐  
Repeat C-section ..... 04 ☐  
Forceps ..... 05 ☐  
Vacuum ..... 06 ☐

#### 42. CONDITIONS OF THE NEWBORN

(Check all that apply)

Anemia (Hct < 39/Hgb < 13) ..... 01 ☐  
Birth injury ..... 02 ☐  
Fetal alcohol syndrome ..... 03 ☐  
Hyaline membrane disease/RDS ..... 04 ☐  
Meconium aspiration syndrome ..... 05 ☐  
Assisted ventilation < 30 min. ..... 06 ☐  
Assisted ventilation ≥ 30 min. ..... 07 ☐  
Seizures ..... 08 ☐  
None ..... 00 ☐  
Other (Specify) ..... 09 ☐

#### 43. CONGENITAL ANOMALIES OF CHILD

(Check all that apply)

Anencephalus ..... 01 ☐  
Spina bifida/Meningocele ..... 02 ☐  
Hydrocephalus ..... 03 ☐  
Microcephalus ..... 04 ☐  
Other central nervous system anomalies (Specify) ..... 05 ☐  
Heart malformations ..... 06 ☐  
Other circulatory/respiratory anomalies (Specify) ..... 07 ☐  
Rectal atresia/stenosis ..... 08 ☐  
Tracheo-esophageal fistula/Esoophageal atresia ..... 09 ☐  
Omphalocele/Gastroschisis ..... 10 ☐  
Other gastrointestinal anomalies (Specify) ..... 11 ☐  
Malformed genitalia ..... 12 ☐  
Renal agenesis ..... 13 ☐  
Other urogenital anomalies (Specify) ..... 14 ☐  
Cleft lip/palate ..... 15 ☐  
Polydactyly/Syndactyly/Adactyly ..... 16 ☐  
Club foot ..... 17 ☐  
Diaphragmatic hernia ..... 18 ☐  
Other musculoskeletal/integumental anomalies (Specify) ..... 19 ☐  
Down's syndrome ..... 20 ☐  
Other chromosomal anomalies (Specify) ..... 21 ☐  
None ..... 00 ☐  
Other (Specify) ..... 22 ☐

## APPENDIX D

### DEFINITIONS

<b><i>Abortion Fraction</i></b>	The number of induced abortions per 1,000 reported pregnancies (live births + fetal deaths of 20 or more weeks gestation + induced abortions).
<b><i>Abortion Rate</i></b>	The number of induced abortions per 1,000 females of specified age.
<b><i>Age</i></b>	Age at last birthday.
<b><i>Age-standardized Abortion Rate</i></b>	The abortion rate calculated by applying the state's rate within 5-year age groups to the July 1980 N.C. female population in those same age groups. A rate is standardized to control for differences in age distribution over time or between population groups.
<b><i>Clinic</i></b>	A freestanding facility, neither physically attached to nor operated by a licensed hospital, for the performance of abortions.
<b><i>Education</i></b>	The number of years of schooling completed.
<b><i>Fertility Rate</i></b>	The number of live births per 1,000 females of specified age.
<b><i>Fetal Death</i></b>	Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, as indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles (definition adopted by World Health Organization in 1950).
<b><i>Gestation</i></b>	Weeks of pregnancy as computed from date of last menstrual period.
<b><i>Induced Abortion</i></b>	The purposeful interruption of pregnancy with the intention other than to produce a live born infant or to remove a dead fetus and which does not result in a live birth.
<b><i>Live Birth</i></b>	The complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or any definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached (definition adopted by World Health Organization in 1950).
<b><i>Living Children</i></b>	The number of children still living at the time of this event.
<b><i>Married</i></b>	Includes women living with a husband and those who are separated but not legally divorced. In the case of live births and fetal deaths, the term also includes mothers who have been legally divorced 280 or fewer days.
<b><i>Not Married</i></b>	Includes women who are widowed or divorced and those who have never married. In the case of live births and fetal deaths, widowed or divorced includes only mothers who have been widowed or legally divorced for more than 280 days.
<b><i>Occurrence</i></b>	The facility, county, region, or state in which the event occurred.
<b><i>Pregnancy Rate</i></b>	The number of pregnancies per 1,000 females of specified age.
<b><i>Previous Abortions</i></b>	The number of previous induced abortions the abortee has had. The current procedure is not included.
<b><i>Race</i></b>	Two broad categories, "white" and "nonwhite," are used. "Nonwhite" is predominantly Black (90%) in North Carolina.
<b><i>Residence</i></b>	The usual county, region, or state of residence of the pregnant woman.
